Work. Play. Enjoy!

Your new offers make travel a whole lot more rewarding

[REGISTER NOW](#)

Hi, @whitley—

Can you believe the year is half over? That makes it a great time to focus on your goals or just change tempo and enjoy time away with friends or family.

It's also a great time to be a part of Accelerate, because when you stay at IHG hotels between 1 June and 31 August, your vacation and business travel will quickly become a whole lot more rewarding.

Ready to go? The offers below will help you make this a year of memorable experiences.

SAMSUNG Knox

Mobile security made for the way people really work.

Humans will be humans. Naturally they'll send last minute emails from unsecure airport wifi. But don't worry. We've built mobile security from the chip up, to make things easier for you. Because why attempt to change your employees' behavior, when you can simply change their mobile security?

Defense-grade security for an open world.

VPN configuration required. Samsung Knox solutions utilizing VPN configuration sold separately.

BROCHURE

High efficiency. Low emissions.

ChaverBrooks recognizes there is a need for advanced technologies that enable a more energy-efficient and environmentally friendly generation of steam and hot water to help make boiler rooms more green. We are one of only a few boiler manufacturers in the world that has a dedicated product development center. Our center is annually funded with the specific mission of developing efficient and sustainable products.

Turkey conversions and comprehensive upgrade and retrofit capabilities from our world class engineering staff make it easy to change fuel types, lower emissions, increase boiler efficiency, or bring any age system back to the manufacturer's original specifications. ChaverBrooks has the solution and dedicated aftermarket team to help you engineer and implement whatever adjustment or retrofit you may need.

By continuing to develop and encourage greater boiler room solutions, ChaverBrooks estimates over the next decade we will help U.S. companies save billions in fuel and facility costs and prevent more than 100,000 tons of emissions and particulates from entering the environment.

The chart in the right outlines turnkey solutions which can be implemented on virtually any boiler, as an accessory when ordering a new boiler, or as retrofit to improve the efficiency of an existing system.

Efficiency and sustainability are not only environmentally beneficial, but economical necessities for our customers.

Lower Emissions Solutions

Air Pre-Heater Gas Recirculation (APR) Can be added to almost any boiler to reduce the formation of NOx emissions.	
Upgrade Controls Advanced controls can be added or upgraded on any boiler to optimize emissions as low as possible.	
Burner Upgrades Burners should be upgraded every 10-12 years to bring your combustion system up to date with the latest emissions regulation available.	
Blow Requirements If your boiler is 15-20 years old, it often meets the most severe regulatory codes with the least emissions regulation available.	
Add Selective Catalytic Reduction (SCR) Can be added to boiler systems to achieve emissions requirements that are less than the best available boiler and combustion technology.	

Energy-Efficient Solutions

Feed Conventions We can engineer a feed convention or your existing boiler system to utilize low emissions steam generators and improve efficiency over any other.	
Upgrade Controls Advanced controls can be added or upgraded on any boiler to keep your boiler operating at peak efficiency every day.	
Burner Upgrades Upgrade burner burners from the highest standard and modular burner design available to prevent energy loss from boiler cycling in the fire.	
Add Heat Recovery Any boiler can benefit from a heat recovery system, which recovers waste without heat exchanger heat a cooler water source, such as a hot discharge.	
Blow Requirements If your boiler is 15-20 years old, it operates at a less efficient efficiency or age than boiler systems offer, making the most boiler system.	

Significant Impact 

Maximum Impact 

The power of total integration

At a time when the world is looking for ways to reduce energy consumption and carbon emissions, we are working to make our plants more efficient and sustainable. Our total integration approach is the key to achieving these goals.

Product Development

Our product development team is focused on creating innovative solutions that meet the needs of our customers. We work closely with our clients to understand their requirements and develop customised products that deliver superior performance.

Process Efficiency

Our process efficiency team is dedicated to optimising our manufacturing processes. We use advanced technologies and data analytics to identify areas for improvement and implement changes that reduce waste and increase productivity.

Customer Service

Our customer service team is committed to providing exceptional support to our clients. We offer a range of services, including technical assistance, training, and maintenance, to ensure our customers are satisfied with their experience.

The most comprehensive, integrated solutions

Our total integration approach is the most comprehensive and integrated solution available. It combines our expertise in product development, process efficiency, and customer service to deliver a complete solution that meets all of our customers' needs.

Selective Catalytic Reduction (SCR)

SCR is a technology used to reduce nitrogen oxide (NOx) emissions from industrial processes. It involves the use of a catalyst to convert NOx into nitrogen and water.

1. Design

The design phase involves determining the required capacity and efficiency of the SCR system. This is done by analysing the process flow and identifying the sources of NOx emissions.

2. Installation

The installation phase involves the physical installation of the SCR system. This includes the selection of the catalyst, the design of the reactor, and the installation of the necessary piping and controls.

3. Commissioning

The commissioning phase involves testing the SCR system to ensure it is operating correctly. This includes checking the flow rates, the catalyst activity, and the NOx reduction efficiency.

4. Maintenance

The maintenance phase involves regular inspection and maintenance of the SCR system. This includes checking the catalyst activity, the reactor temperature, and the flow rates.

A long-standing tradition

Our company has a long history of providing high-quality industrial equipment and services. We have a proven track record of delivering reliable and efficient solutions to our customers.

Product Range

- Process Equipment
- Heat Exchangers
- Distillation Columns
- Refrigeration Systems
- Compressors
- Pumps
- Valves
- Control Systems

Service Offering

- Design
- Manufacturing
- Installation
- Commissioning
- Operation
- Maintenance
- Repair
- Replacement

Global Presence

Our company has a global presence with offices and manufacturing facilities in many countries. We have a strong reputation for providing high-quality products and services to our international customers.

Commitment to Sustainability

Our company is committed to sustainable development. We are focused on reducing our carbon footprint, conserving resources, and promoting social responsibility.

**COST-EFFECTIVE RENTAL BOILERS
TO MEET ANY NEED
QUICKLY AND EFFICIENTLY.**

We've made renting a high-efficiency, low-emission boiler easier than ever. Renting a quality system offers your company the flexibility to instantly adapt to changing business demands.

- Firetubes from 5 – 800 HP
- Watertube boilers to 250,000 pounds per hour
- High-pressure, low-pressure, superheated
- Each rental contract begins with a boiler consultation to access your needs
- Turnkey installation can cut the ramp-up time
- Onsite training of your people by our experienced staff
- Ongoing 24/7 service to assist you throughout the rental period
- Fully equipped mobile plants to provide reliable steam anywhere
- Trailer and skid-mounted package boilers for peak load periods and emergencies
- A skilled staff to assist you with tie-in to your system

Cleaver-Brooks Sales and Service is offered in the following locations:

BLOOMINGTON | CHICAGO | CORPUS CHRISTI | DALLAS - FT. WORTH | DES MOINES
 HOUSTON | KANSAS CITY | MCALLEN | QUAD CITIES | SAN ANTONIO | ST. LOUIS

Is your company outside the service areas listed above?
